Patent No. 6551795

GENERAL INFORMATION:
APPLICANT: MAKE J. Rubenfield et al.
APPLICANT: MAKE J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REPRENCE: 107196.136
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT PILING DATE: 1999-02-18
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/094,190
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     RESULT 6

US-09-252-991A-24981

US-09-252-991A-24981

Sequence 24981, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:

APPLICANT: Marc J. Rubenfield et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION: ABSTUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

FILE REPERENCE: 107196.136

CURRENT APPLICATION NUMBER: US/09/252,991A

CURRENT FILING DATE: 1999-02-18

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-07-27

NUMBER: OF SEQ ID NOS: 33142

SEQ ID NOS: 33142
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      RESULT 9

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A; Title: Isolation and characterization of a novel member of the neural zinc finger fact A; Accession: T14124

A; Accession: T14124

A; Residues: preliminary; translated from GB/EMBL/DDBU

A; Molecule type: mRNA

A; Mosicules: 1-1032 cyEE>

A; Mosicules: 1-1032 cyEE>

A; Accession: T14124

A; Cross-references: UNIPROT: Q9QX27; EMBL: AF031942; NID: g2914750; PID: g2914751; PIDN: AAC4
C; Genetics:
A; Mosicules: T2F-3

C; Function:
A; Description: confers repression on the basal activity of promoters containing the constituents by Description factor; zinc finger

C; Keywords: DNA binding; transcription factor; zinc finger
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1,

2: uniprot_trembl:*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Cabrera V.M., Maca-Meyer N., Gonzalez A.M., Larruga J.M., Flores C.;
Submitted (MAR-2003) to the EMBL/GenBank/DDBJ databases.

--- CATALYTIC ACTIVITY: NADH + ubiquinone = NAD(+) + ubiquinol.

--- SIMILARITY: Belongs to the complex I subunit 1 family.

C. -- CATALTYTIC ACTIVITY: NADH + ubiquinone = NAD(+) + ubiquinol.
C. -- DISEASE: Defects in MTNDI are a cause of Leber's hereditary optic
atrophy. LHON [MIM:535000]; also known as Leber's optic
c. atrophy. LHON [MIM:535000]; also known as Leber's optic
atrophy. LHON is a maternally inherited disease resulting in acute
bilateral bindness due to retinal degeneration predominantly in
young men. Cardiac conduction defects and neurological defects
have also been described, resulting in optic nerve degeneration
and cardiac dysrhythmia.
C. -- DISEASE: Defects in MTNDI are a cause of mitochondrial
encephalomyopathy with lactic acidosis and stroke-like episodes
syndrome (MELAS) [MIM:54000]. MELAS is a genetically
heterogenious disorder, characterized by episodic vomiting,
selizures, and recurrent cerebral insults resembling strokes and
causing hemiparesis, hemianopsia, or cortical blindness.
C. -- DISEASE: Defects in MTNDI could be associated to mitochondrial
susceptibility to Alzheimer's disease (AD) [MIM:50200].
C. -- DISEASE: Defects in MTNDI could be associated with non-insulin-
dependent diabetes mellitus (NIDDM)
C. -- DISEASE: Defence in MTNDI complex I subunit I family.

Tinneage-specific selection in human mtDNA: lack of polymorphisms in a segment of MTNDS gene in haplogroup J.";

Mol. Biol. Evol. 20:2133-2142(2003).

-!- CATALYTIC ACTIVITY: NADH + ubiquinone = NAD(+) + ubiquinol.

-!- SIMILARITY: Belongs to the complex I subunit 1 family.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
